

Detached Home

The detached design has the curb appeal of a traditional Arts & Crafts home within a New Urbanist Community.

The design is sensitive to the ability to construct good quality homes in an efficient manner. A plumbing core or wet wall could be manufactured off-site and craned into place. Factory built modules could be stacked to create the house.

This design features flexible floor plans and building systems that enable interior spaces to be reconfigured more easily. The space over the garage could be customized or if money is a concern, it could be finished at a later date. The front room on the first floor has access to a bathroom that could be redesigned as a first floor bedroom.
