Omaha (KPTM) - "It's a blessing," the Dial family said about their new home.

They are thankful to be moving in, but this isn't just any home.

It was built by Omaha company Brighton Construction.

They call it the best built home in the nation. It's energy efficient, durable and flexible.

The walls can be moved throughout the home.

That lets the family adjust the home to have anywhere from three to seven bedrooms.

"it was built as a learning tool to show what the industry can do, when all the advances in housing construction are combined into one project," said president of Brighton Construction Fernando Pages.

There is only one other home like this in the United States. The builders don't plan to build anymore because of the cost.
